# Modbus table for connecting S21 automation to BMS

## TO ENABLE OPERATION VIA THE MODBUS RTU PROTOCOL THROUGH THE RS-485 INTERFACE, DISCONNECT ALL THE WIRED CONTROL PANELS CONNECTED TO THE AIR HANDLING UNIT THROUGH THIS INTERFACE

### SIMULTANEOUS OPERATION THROUGH RS-485, WI-FI, AND ETHERNET INTERFACES IS POSSIBLE

#### TO USE WIRED CONTROL PANELS, THE BMS MUST BE CONNECTED THROUGH WI-FI AND/OR ETHERNET INTERFACES VIA MODBUS TCP PROTOCOL

#### **MODBUS PARAMETERS**

Modbus RTU									
Baud rate	Number of data bits	Stop bits	Parity type	Address					
9600		1	None (by default)	1-16					
14400		1.5	even	1 (by default)					
19200		2 (by default)	odd						
38400	8								
57600									
115200 (by default)									

	Modbus TCP										
IP address*	Port	Maximum number of simultaneous TCP connections	TCP connection timeout								
Static	502	For Ethernet = 1, for Wi-Fi = 1	30 seconds								
DHCP (by default)											

<sup>\*</sup>Wi-Fi IP address in access point mode – 192.168.4.1

The RS-485, Wi-Fi, and Ethernet network parameters for air handling units are configured using a mobile application. Maximum number of registers in one package: 125 (for 16-bit registers) and 2000 (for 1-bit registers). Supported modbus functions: 1, 2, 3, 4, 5, 6, 15, 16.
